RODEO FOR A REASON—OUR STORY

It all began early in 2007, when two barrel racers with a shared vision to glorify God met via a horse sale and began organizing free clinic. Kendra Dickson and Chrystal co-founded what is now know as "Rodeo For A Reason."

The first free clinic was held near Denton, Texas, in July of 2007. Thirty six students attended and a trophy saddle was awarded to the rider who was voted on as the "Champion For Christ". Team Gold Buckle was born.

Since then, the team and their vision has grown leaps and bounds. Saddles, buckles, horse trailers and other great prizes have been awarded over the years. Team representation spreads across the country and Canada, with members traveling as often as possible, to host large and small groups. There are professional barrel racers, iconic and legendary horse trainers, veterinarians, equine chiropractors and sports therapists, as well as many other horse professionals on board... all using their skill set for a greater cause.

Teaching horsemanship and barrel racing has become the ideal platform for Team Gold Buckle to share their faith in Jesus Christ. Over the years God has provided new avenues and opportunities to bless people far beyond the rodeo arena.

Team Gold Buckle raises funding and awareness for several other ministries and charities; The Shepherd's Hand food mini try in Denton, Texas, Hand of Hope Ministries (Joyce Meyer), Southwestern Medical cancer research and patient care and children's cancer awareness.

Team Gold Buckle has a BIG dream to build a campus, Gold Buckle University, and offer a place where students can come for a day, week, month or semester... a place where Team Gold Buckle Instructors can continue to use their skills of horsemanship to reach people for Jesus.

Kendra's personal goal is to qualify for the National Finals Rodeo in Las Vega and ride each round of competition in honor of a different ministry or charity. She calls the dream "10.10.10" which stands for Ten Rounds, Ten Saddles, Tenfold. Team Gold Buckle will give away a saddle for each performance to raise money and awareness for the various "Reasons" they Rodeo.

Chrystal has recently become an ordained minister and enjoys using her time to speak and sing at many barrel racing events throughout Oklahoma and Texas. God has also placed a prison ministry in her care and she is devoted much time to reaching souls for Christ.

Thank you for taking the time to stop by and read about Rodeo For A Reason. Prayers are always appreciated! God Bless you, keep you and prosper you. If you have an idea and would like to help sponsor Team Gold Buckle, please send us a message. Or if you have a prayer request, we would love to pray with you.

Blessings,

Team Gold Buckle

FEED GREATNESS™

Our team of PhD equine nutritionists spent countless hours doing research on a gastric health innovation.

But mostly, we just went with his gut.

FEED GREATNESS™

Meet our partner in innovation. A hectic performance schedule puts a lot of stress on your horse's stomach. When Slick by Design wasn't busy making history in the barrel-racing world, he, along with horses at our nutrition center, helped us develop a supplement to support gastric comfort to keep horses performing. And when this new product hits stores in June, it may do the same for your horse.

OSPHEOS[®]

(clodronate injection)

An affordable option—
Ask your veterinarian
for details!

A stride forward for Navicular Syndrome

Introducing OSPHEOS, the new
FDA approved intramuscular
bisphosphonate injection from
Dechra Veterinary Products

Easily administered
via intramuscular
injection

Proven efficacy*
at 6 months
post treatment

Quick and
convenient

Well tolerated*
in clinical trials

OSPHEOS contains clodronate disodium, a bisphosphonate indicated for the control of clinical signs associated with navicular syndrome in horses. OSPHEOS is the only FDA-approved bisphosphonate for use in horses that is labeled for intramuscular injection. In a clinical trial evaluating OSPHEOS in 86 horses, lameness improved in 74.7% of horses by at least one grade 56 days after treatment. Only 9% of horses displayed clinical signs of being uncomfortable, nervous, colicky and/or pawing after receiving OSPHEOS. Less than 1% of horses experienced colic requiring treatment.

As with all drugs, side effects may occur. In field studies, the most common side effects reported were signs of discomfort or nervousness, colic, and/or pawing. OSPHEOS should not be used in pregnant or lactating mares, or mares intended for breeding. Use of OSPHEOS in patients with conditions affecting renal function or mineral or electrolyte homeostasis is not recommended. Refer to the prescribing information for complete details or visit www.dechra-us.com.

CAUTION: Federal law restricts this drug to use by or on the order of licensed veterinarian.

* Freedom of Information Summary, Original New Animal Drug Application, NADA 141-427, for OSPHEOS, April 28, 2014.

OSPHEOS[®]

(clodronate injection)

Bisphosphonate
For use in horses only.

Brief Summary (For Full Prescribing Information, see package insert)

CAUTION: Federal (USA) law restricts this drug to use by or on the order of a licensed veterinarian.

DESCRIPTION: Clodronate disodium is a non-amino, chloro-containing bisphosphonate. Chemically, clodronate disodium is (dichloromethylene) diphosphonic acid disodium salt and is manufactured from the tetrahydrate form.

INDICATION: For the control of clinical signs associated with navicular syndrome in horses.

CONTRAINDICATIONS: Horses with hypersensitivity to clodronate disodium should not receive OSPHEOS.

WARNINGS: Do not use in horses intended for human consumption.

HUMAN WARNINGS: Not for human use. Keep this and all drugs out of the reach of children. Consult a physician in case of accidental human exposure.

PRECAUTIONS: As a class, bisphosphonates may be associated with gastrointestinal and renal toxicity. Sensitivity to drug associated adverse reactions varies with the individual patient. Renal and gastrointestinal adverse reactions may be associated with plasma concentrations of the drug. Bisphosphonates are excreted by the kidney; therefore, conditions causing renal impairment may increase plasma bisphosphonate concentrations resulting in an increased risk for adverse reactions. Concurrent administration of other potentially nephrotoxic drugs should be approached with caution and renal function should be monitored. Use of bisphosphonates in patients with conditions or diseases affecting renal function is not recommended. Administration of bisphosphonates has been associated with abdominal pain (colic), discomfort, and agitation in horses. Clinical signs usually occur shortly after drug administration and may be associated with alterations in intestinal motility. In horses treated with OSPHEOS these clinical signs usually began within 2 hours of treatment. Horses should be monitored for at least 2 hours following administration of OSPHEOS.

Bisphosphonates affect plasma concentrations of some minerals and electrolytes such as calcium, magnesium and potassium, immediately post-treatment, with effects lasting up to several hours. Caution should be used when administering bisphosphonates to horses with conditions affecting mineral or electrolyte homeostasis (e.g. hyperkalemic periodic paralysis, hypocalcemia, etc.).

The safe use of OSPHEOS has not been evaluated in horses less than 4 years of age. The effect of bisphosphonates on the skeleton of growing horses has not been studied; however, bisphosphonates inhibit osteoclast activity which impacts bone turnover and may affect bone growth.

Bisphosphonates should not be used in pregnant or lactating mares, or mares intended for breeding. The safe use of OSPHEOS has not been evaluated in breeding horses or pregnant or lactating mares. Bisphosphonates are incorporated into the bone matrix, from where they are gradually released over periods of months to years. The extent of bisphosphonate incorporation into adult bone, and hence, the amount available for release back into the systemic circulation, is directly related to the total dose and duration of bisphosphonate use. Bisphosphonates have been shown to cause fetal developmental abnormalities in laboratory animals. The uptake of bisphosphonates into fetal bone may be greater than into maternal bone creating a possible risk for skeletal or other abnormalities in the fetus. Many drugs, including bisphosphonates, may be excreted in milk and may be absorbed by nursing animals.

Increased bone fragility has been observed in animals treated with bisphosphonates at high doses or for long periods of time. Bisphosphonates inhibit bone resorption and decrease bone turnover which may lead to an inability to repair micro damage within the bone. In humans, atypical femur fractures have been reported in patients on long term bisphosphonate therapy; however, a causal relationship has not been established.

ADVERSE REACTIONS: The most common adverse reactions reported in the field study were clinical signs of discomfort or nervousness, colic and/or pawing. Other signs reported were lip licking, yawning, head shaking, injection site swelling, and hives/pruritus.
